

## HIGHLIGHTS

Over 1,800km<sup>2</sup> of prime exploration licenses covering the key Arlit, Madaouela, and Azouza fault intersections in the Tim Mersoï Basin, Niger.

Multiple world-class projects in the immediate vicinity, including Africa's largest uranium deposit, Orano's Imouraren (384 Mlbs eU<sub>3</sub>O<sub>8</sub>), and GLO's Dasa (236 Mlbs eU<sub>3</sub>O<sub>8</sub>).

Extensive historic exploration by Areva (now Orano) across our areas including 28km of drilling and high-resolution geophysics.

20% of historic holes intersected >100ppm eU<sub>3</sub>O<sub>8</sub>.

We have Orano's data worth millions, and plans for follow-up at key areas.

Orano just announced in-situ recovery testing at Imouraren. Success could transform its economics and bode extremely well for Myriad's Agebout exploration areas.

Game-changing intersections at next-door Dasa (0.7m at 13.63% eU<sub>3</sub>O<sub>8</sub> within 43.6m at 3.0%) on the Azouza fault which runs directly into our project.

Deep in-country relationships with government, private sector, Orano.

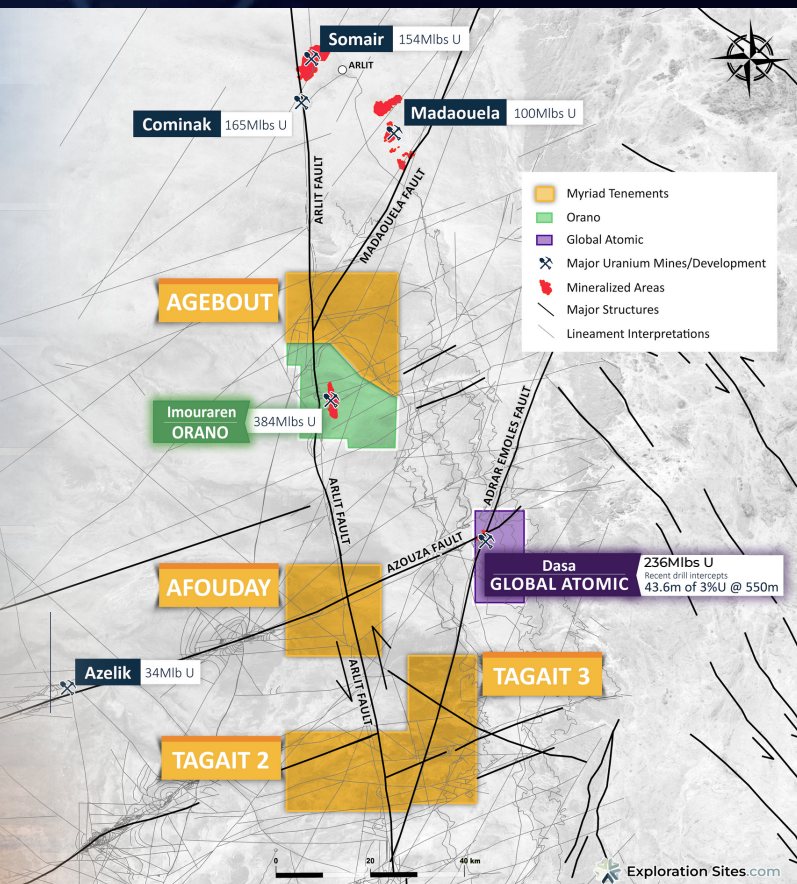

Director Fred Bonner, P. Geo, is a recognized leader in environmental stewardship and socially responsible exploration.

Niger has one of the world's largest uranium reserves and could soon be the world's 2<sup>nd</sup> largest U producer.

Niger has been providing America's largest utilities with secure and uninterrupted uranium supply since 2007. Not coincidentally, America's largest air force base in Africa is located in the heart of the Tim Mersoï Basin.

## EXPLORATION PLAN

Historic data review completed.

Field-based confirmation of surface anomalies underway.

Ultra-high resolution drone mag survey and surface geophysics over key targets next to Imouraren and Dasa. 1H 2023.

Identify and constrain target horizons and depths for drill targeting.

Drilling 2H 2023.
